*Over 46 States
and 19 Countries*

Fellow Mineral Enthusiasts, Did You Know...?

- That there is a Society dedicated to the sharing of knowledge and experiences in collecting, identifying and displaying minerals (in all forms) which exhibit various forms of **luminescence**, including: **fluorescence, phosphorescence, triboluminescence, and thermoluminescence.**
- That there is an organization to promote fellowship among collectors through meetings, shows, open dialogue and communication on the collection, study, exchange, displaying, and promotion of fluorescent minerals.
- That a group of enthusiasts have organized to obtain, disseminate, collaborate, and archive information on the luminescent properties of minerals, and their derivatives (lapidary, art work, jewelry, etc...)

If not, then you must go and see for yourself:

Visit: <http://www.uvminerals.org/> for General Society Information.
